IMPRESSIONS

1/7

INDEXED URLS

Critical Issues Found:

1. **Enable text compression** (score: 0%)
2. **Reduce unused JavaScript** (score: 10%)
3. **Eliminate render-blocking resources** (score: 12%)
4. **SEO:** robots.txt is not accessible (returns 403)
5. **SEO:** Page has no meta description on multiple subdomains

Quick Wins:

1. Serve static hero image instead of WebGL canvas on first load: save ~2400ms
2. Add India-edge CDN (Cloudflare/Fastly): save ~650ms
3. Use Next.js dynamic() for WebGL components: save ~1100ms

2. Core Web Vitals & Performance

35/100

2.1 Lighthouse Scores

Lighthouse gauge scores

Figure 1: Lighthouse audit scores across Performance, Accessibility, Best Practices, and SEO.

Category	Score	Rating
Performance	35	Poor
Accessibility	55	Needs Work
SEO	48	Poor

2.3 CrUX Field Data (28-day Rolling Average)

Metric	p75	Rating	Good %	NI %	Poor %
lcp	?	?	N/A%	N/A%	N/A%
inp	?	?	N/A%	N/A%	N/A%
cls	?	?	N/A%	N/A%	N/A%

2.4 Failed / Warning Audits (5)

Audit	Score	Details
Eliminate render-blocking resources	12%	Resources are blocking the first paint of your page.
Reduce unused JavaScript	10%	Remove unused JavaScript to reduce bytes consumed by network activity.
Properly size images	15%	Serve images that are appropriately-sized to save cellular data and improve load time.
Defer offscreen images	20%	Consider lazy-loading offscreen and hidden images.

Audit	Score	Details
Enable text compression	0%	Text-based resources should be served with compression to minimize total network bytes.

SEO Audit Issues (4)

robots.txt is not accessible (returns 403)
Page has no meta description on multiple subdomains
Links do not have descriptive text
Page has a successful HTTP status code

Optimization Opportunities (4)

Opportunity	Estimated Savings
Serve static hero image instead of WebGL canvas on first load	2400ms
Add India-edge CDN (Cloudflare/Fastly)	650ms
Use Next.js dynamic() for WebGL components	1100ms
Enable Brotli/gzip compression	480ms

3. Search Console Performance

Period: ? to ? | Property: ?

? appeared in 0 unique search queries with 0 total impressions during this period.

3.1 Key Metrics

0 TOTAL CLICKS	0 TOTAL IMPRESSIONS	0% AVERAGE CTR	0 QUERIES FOUND
-------------------	------------------------	-------------------	--------------------

Search Analytics data has a 2-3 day lag. Data available for ~16 months.

4. Indexation Status

4.1 Index Coverage Overview

Index status donut chart

Figure 3: URL indexation status distribution from Google URL Inspection API.

Total URLs inspected: 7

1

INDEXED

5

NOT INDEXED

Index Rate: 14.3% of inspected URLs are indexed by Google.

Index Rate: 14% of inspected URLs are indexed.

URL Inspection API: 2,000 inspections/day per property.

5. Recommendations

Prioritized action items based on the data collected. Items are ranked by expected impact on search visibility and user experience.

CRITICAL

Fix Immediately

1. Improve Lighthouse Performance Score

Effort: Medium (2-4 hrs)

Current score is 35/100. Focus on reducing Largest Contentful Paint and Total Blocking Time. Defer non-critical JavaScript and optimize images.

2. Fix SEO Issue: robots.txt is not accessible (returns 403)

Effort: Low (30 min)

This Lighthouse SEO check is failing. Address it to ensure proper crawling and indexing by search engines.

3. Fix SEO Issue: Page has no meta description on multiple subdomains

Effort: Low (30 min)

This Lighthouse SEO check is failing. Address it to ensure proper crawling and indexing by search engines.

4. Resolve 5 Non-Indexed URL(s)

Effort: Medium (2-4 hrs)

These pages are not appearing in Google's index. Review coverage state, fix crawl errors, and request re-indexing via Search Console.

HIGH

Fix Within 1 Week

5. Address: Enable text compression

Effort: Medium (1-2 hrs)

Score: 0%. Text-based resources should be served with compression to minimize total network bytes.

6. Address: Reduce unused JavaScript

Effort: Medium (1-2 hrs)

Score: 10%. Remove unused JavaScript to reduce bytes consumed by network activity.

7. Address: Eliminate render-blocking resources

Effort: Medium (1-2 hrs)

Score: 12%. Resources are blocking the first paint of your page.

8. Address: Properly size images

Effort: Medium (1-2 hrs)

Score: 15%. Serve images that are appropriately-sized to save cellular data and improve load time.

9. Address: Defer offscreen images

Effort: Medium (1-2 hrs)

Score: 20%. Consider lazy-loading offscreen and hidden images.

10. Serve static hero image instead of WebGL canvas on first load

Effort: Medium (2-4 hrs)

Potential savings of ~2400ms. Implement this to improve page load speed.

11. Add India-edge CDN (Cloudflare/Fastly)

Effort: Medium (2-4 hrs)

Potential savings of ~650ms. Implement this to improve page load speed.

12. Use Next.js dynamic() for WebGL components

Effort: Medium (2-4 hrs)

Potential savings of ~1100ms. Implement this to improve page load speed.

MEDIUM

Fix Within 1 Month

13. Improve Accessibility Score

Effort: Medium (2-4 hrs)

Current score: 55/100. Run a detailed accessibility audit and address any violations.

Implementation Roadmap

Week 1 — Quick Wins

- Fix failing Lighthouse SEO checks

Week 2–3 — Performance & Indexation

- Optimize Largest Contentful Paint and Total Blocking Time
- Resolve 5 non-indexed URL(s)
- Implement 4 performance optimization(s)

Week 4 — Content & Search Optimization

- Review and improve content depth for underperforming pages
- Set up ongoing monitoring and reporting cadence

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
